

NEWGEN

Hallmark of innovation

SporoGEN Aqua

Pond Probiotic for aquaculture

SporoGEN Aqua

Pond Probiotic for aquaculture

Sporogen Aqua is an unique blend of new generation specific strains of probiotics (*Bacillus subtilis* & *Bacillus licheniformis*), prebiotic and yeast (*Saccharomyces cerevisiae*) for aquatic species of animals and for pond water quality along with vibrio management.

Mode of action

- Microbial antagonism
- Production of inhibitory compounds
- Competition for chemical and adhesion site
- Improving the microbial balance and bioremediation of accumulated organic load in the pond bottom

Feature

- Ideal combinations
- Proven strains of microbes
- Microbes in the form of active spores
- Resistance to wide range of pond ecosystem
- Yeast in the form of micro - encapsulation
- Compatible with other feed additives

Recommendation

Pond Preparation: 1 kg / ha

During Culture Period: 250 g -500 g depending on Biomass and water depth

Benefits

- Improves pond water quality
- Reduces pathogenic vibrios
- Enhances decomposition of organic wastes
- Stabilizes pH, and pond ecosystem for better growth and survival of shrimp

Presentation : 500 g & 1 kg bags
