

Vimicell™ Aqua

Macro & Trace minerals for aquaculture

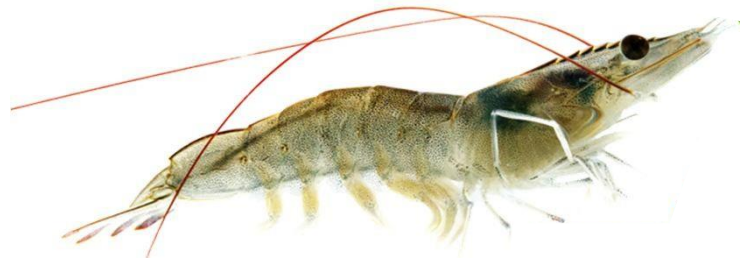

Vimicell™ Aqua is the balanced formulation of essential major minerals like Calcium, Phosphorus and Sodium along with trace minerals like Zinc, Copper, Cobalt, Iron, Manganese, Iodine and Selenium in the form of highly bioavailable minerals fortified with phytoplankton growth factor.

Need of Minerals in Aqua Culture

Minerals get lost frequently from the shrimp body after repeated moulting. Better the ionic profile of water is essential for better survivability, moulting and growth. Therefore, it is vital to add minerals in cultured pond water.

Functions of minerals

- Structural component of the body.
- Components of soft tissues.
- Osmoregulation.
- Cofactors / activators of enzymes.
- Components of metalloproteins.

Feature

- Combination of major & trace minerals.
- Enriched with vitamins, essential amino Acids & Phytoplankton growth promoters.
- Highly bioavailable trace minerals.
- Ideal Ratio of Ca: K - 1:1 & Ca: Mg- 1:3.
- Highly soluble minerals.
- Quality assured for elemental concentration.

Benefits

- Better ionic profile of pond water.
- Improves moulting and prevents soft shell in shrimp.
- Better pond colour and Phytoplankton growth.

Recommendation

- 10 kg / acre.
